A Quick Guide to

LINCUS

The next step once you have identified your personal, academic, creative, and extracurricular passions!

UCONN
OUR

| What is Lincus?	Lincus is a platform for UConn-affiliated faculty, staff, and students to learn more about interdisciplinary research occurring across all campuses. Developed by the Schwartz lab, Lincus is a beneficial tool for undergraduates who would like to learn more about different types of research, increase their network, and explore their passions!

Keyword Searches

1. Use key words identified during your brainstorming process to search through research publications across all departments and campuses.

Understanding the Bubble

1. The searched keyword generates a faculty bubble of professors who have published papers with that term.
2. The larger the circle, the more papers the software has detected with that keyword.
3. Lines between professors indicate collaborations between laboratories.
4. The thicker the line, the stronger the collaboration, meaning the software has found more than one paper with both those professors and the keyword.

Filters

When you initially generate the faculty bubble, you will see professors from all campuses. We recommend you start broad will no filters however located on the lefthand corner you can filter by campus, school, and department.

You can also filter by related keyword with the generated word bubble on the righthand corner. this will highlight professors who had that related keyword in a paper.

If you are having trouble and need help with Lincus, feel free to meet with a Peer Research Ambassador or attend any of the OUR workshops to meet with OUR staff and students! Happy searching!!
